Forecast for Monday 12 Jun 2023

Weather: Showery outbreaks through the morning will slowly clear leaving bright spells at times during the morning - soon becoming very warm, with this exacerbated by the humidity. Thundery showers are likely to develop once again, perhaps sooner than on previous days, with these slow-moving and locally torrential. The threat of these showers should ease during the late evening to leave drier but perhaps cloudy conditions, with some valley mist and fog locally possible.

Chance of cloud-free hill tops above 600m: 40% during the morning as band of showery rain clears. Increasing to 70% from midday, but dropping to 60% in heavy showers and thunderstorms.

Low cloud and visibility: Extensive cloud with 400-500m bases likely at first, with mist and hill fog at times from showery outbreaks. Thereafter, high probability of cloud free tops for much of the day, however occasionally dropping to 600-800m bases in heavy showers or thunderstorms. Moderate to poor visibilities to start, improving through the day to generally good, but dropping to low to moderate in showers.

Meteorologist's View

With very high UV levels it is important to be prepared by wearing and taking plenty of protective wear. With further warm weather and high humidity levels, plenty of water will be required as lengthy exposure to strong sunshine and high temperatures can cause exhaustion and dehydration. During the afternoon, heavy and thundery showers may cause gusty winds for a time, and slippery paths and surfaces as well as runoff, so take care while hiking.

Recent rainfall: measured at Neuadd: altitude 353m
